RE: Water well survey of the area surrounding
the former Olin, North Little Rock plant site

Dear Mr. Edwards:

Please find enclosed the information which you requested regarding the Superfund "Hazard Ranking System" and some of the information we have on the Olin, North Little Rock site. Enclosed is the following:

- 1) memo to Keith Bradley, concerning an October 1984 sampling and site inspection by our contractors;
- 2) a copy of the federal regulations explaining the ranking process, 40 CFR Part 300; and
- 3) a preliminary ranking of the site completed by Tim Perdue, the site scored 6.76; this item is only a draft, since the ranking has not yet been subject to our quality assurance and quality control system, which may significantly change the score; a score of about $S_M = 28.5$ or greater is currently required before a site will be placed on the National Priorities List.

I am looking forward to finding out the results of the well inventory which we discussed. If you have any other questions or require further information, please don't hesitate to call me at (214)-767-9853.

Sincerely yours,

Alan Tavenner
Environmental Engineer
